

# County and Metropolitan Area Personal Income

The local area estimates of personal income released each April are consistent with the State estimates that are released at the same time. The State estimates, which are also in the April issues of the SURVEY OF CURRENT BUSINESS, are preliminary annual and quarterly estimates for the most recent year, revised annual and quarterly estimates for the previous year, and revised annual estimates for earlier years. The revised State estimates supersede the estimates published in the previous August issue of the SURVEY.

The local area estimates are routinely revised in each of the two years following their initial release. These revisions incorporate more complete information for local areas as well as revised State and national totals.

Comprehensive (benchmark) revisions are initiated periodically—approximately every

five years—at the national level and extended, where appropriate, to the State and local area levels. The benchmark revisions at the local area level include distributional changes made possible by the availability of new or more current data as well as the definitional, classification, and statistical changes at the national level. The local area personal income estimates reflect the benchmark revisions approximately 18 months after their initial introduction at the national level, and approximately 9 months after their extension to the State estimates.

The local area estimates for 1977-79 in tables 1 and 2 do not reflect the national benchmark revisions introduced in the December 1980 SURVEY. The benchmark-revised local area personal income estimates will be presented in the April 1982 issue of the SURVEY.

Total and per capita personal income for the 273 SMSA's for 1977, 1978, and 1979, are shown in Table 1. Total and per capita personal income for the 8,140

counties and county equivalents are shown for the same years in Table 2.

## Definition of total and per capita personal income

Total personal income is the current income received by residents of an area from all sources. It is measured before deduction of income and other personal taxes, but after deduction of personal contributions for social security, government retirement, and other social insurance programs. It consists of wage and salary disbursements (covering all employee earnings, including executive salaries, bonuses, commissions, payments in kind, incentive payments, and tips), various types of supplementary earnings termed "other labor income," proprietors' income, rental income of persons, dividends, personal interest income, and government and business transfer payments.

**T**HIS article presents estimates of personal income for 1979 and revised estimates for 1977 and 1978 for the Nation's Standard Metropolitan Statistical Areas (SMSA's), counties, and county equivalents. These estimates supersede those presented in the April 1980 SURVEY OF CURRENT BUSINESS. Estimates for 1977 and 1978 reflect methodological revisions of the estimates of civilian government wage and salary disbursements in addition to the routine revisions. The 1977-79 estimates of Federal civilian, State, and local government wages and salaries reflect a shift from the use of periodic and indirectly related source data to the use of current wage data from administrative records generated by the Federal and State unemployment insurance programs. A discussion of the revised procedure is included in the methodological statement that appears in each volume of the nine-volume set *Local Area Personal Income, 1974-79*, scheduled for release by early July (see notice on page 72).

## Acknowledgments

The personal income estimates were prepared under the direction of Edwin J. Coleman, Chief of the Regional Economic Measurement Division. He was assisted by Jeannine S. Goodman. Tables were prepared by Eunice P. James and Kathy A. Albetski of the Regional Economic Information System Branch. Secretarial support was provided by Valerie A. Hamilton.

Estimates of civilian nonfarm wages and salaries and other labor income were prepared under the supervision of Elizabeth H. Queen, Chief of the Regional Wage Branch. She was assisted principally by: Sharon C. Carnevale, Carol E. Evans, Michael G. Pilot, Chen T. Pomsouran, William E. Reid, Jr., Mary H. Risler, Victor Sabadochnay, and James M. Scott.

Estimates of farm income, military wages and salaries, military other labor income, proprietors' income, property income, transfer payments, and contributions for social insurance were prepared under the supervision of Kenneth P. Berleman, Chief of the Regional Income Branch. He was assisted principally by: Vivian G. Coulkin, Gary V. Kennedy, Arthur L. Senselig, and Andrew E. Weiser.

Residence adjustments, disclosure avoidance, and final preparation of the local area personal income accounts were performed under the supervision of David W. Cartwright, Chief of the Regional Economic Information System Branch. He was assisted principally by: Wallace K. Bailey, Paul M. Levit, and Stuart A. Schwartz.

The definitions underlying the local area estimates are, for the most part, the same as those underlying the personal income estimates in the national income and product accounts. The major difference is in the treatment of U.S. citizens temporarily working on assignment abroad. The national estimates include not only Federal personnel—civilian and military—stationed abroad, but also—since the 1976 benchmark revision—U.S. residents employed by private U.S. firms on temporary foreign assignment. The local area estimates include only persons residing in the 50 States and the District of Columbia.

Per capita personal income is computed by dividing the total personal in-

come by midyear population estimates. Population data for July for each year are provided by the Bureau of the Census; the college student population, however, is measured as of April 1.

The per capita personal income estimates should be used with caution for several reasons. In many instances, an unusually high (or low) per capita personal income is the temporary result of unusual conditions, such as a bumper crop, a major construction project (e.g., a defense facility, nuclear plant, or dam), or a catastrophe (e.g., a tornado or drought). In some cases, a high per capita personal income is not representative of the standard of living in an area. For example, a construction project may attract a large number of high-

paid workers who are included in the population but who send a substantial portion of their wages to dependents living in other areas. Conversely, a county with a large institutional population (e.g., residents of a college, correctional institution, or domiciliary medical facility) may show an unusually low per capita personal income, which is not necessarily indicative of the economic well-being of the noninstitutional population. Moreover, population is measured at midyear whereas income is measured as a flow over the year. Therefore, a significant change in population during the year can cause a distortion in the per capita personal income estimates, particularly if the change occurs around midyear.

**PERSONAL** income by type of payment and labor and proprietors' income by major industry groups, as shown in Table A, are available for SMSA's and for counties for 1969, 1962, and 1965-79. This information can be obtained for one or more counties or SMSA's from the Regional Economic Information System of the Regional Economic Measurement Division, Bureau of Economic Analysis. For computer printouts, there is a charge of \$1 for each State, SMSA, or county table. However, charges will not exceed: \$250 for a complete set of SMSA tables, and \$1,000 for an entire set of State and county tables for the United States. The tables are also available (at lower cost) in microfiche and magnetic tape form. The minimum charge for each request is \$5. Requests should be addressed to Regional Economic Information System, BE-55, Bureau of Economic Analysis, U.S. Department of Commerce, Washington, D.C. 20230.

A nine-volume set, *Local Area Personal Income, 1974-79*, will be available by July. A national volume (volume 1) will contain personal income estimates for the United States and all the regions, States, SMSA's, and BEA economic areas. It will also include a detailed description of the sources and methods used in estimating local area personal income, as well as analytic tables, charts, and maps. Each of the eight regional volumes (volumes 2-9) will contain detailed personal income estimates for the States, SMSA's,

and counties of a single region with related analytic tables, charts, maps,

and a summary methodology (see notice on page 72).

1. Estimates based on 1977 SIC.

2. Estimates based on 1972 SIC.

3. Consists of wage and salary disbursements, other labor income, and proprietors' income. Primary source for private nonfarm wages: EB-202 covered wages—Connecticut Employment Security Division.

4. Includes the capital consumption adjustment for nonfarm proprietors.

5. Includes wages and salaries of U.S. residents working for international organizations in the United States.

6. Includes the capital consumption adjustment for rental income of persons.
